

What is the Aviation Safety Action Program

1. ASAP is a voluntary, non punitive reporting program, where employees may self-disclose safety related events or concerns.
2. ASAP benefits the organization and FAA by uncovering latent conditions. It creates a partnership by allowing the employee, organization and FAA to work together in mitigating organizational risk.
3. The ASAP MOU is a contract between the organization and FAA. Organizations can facilitate their own ASAP internally. In cases where the organization lacks resources, to manage the program, they can have a 3rd party facilitator facilitate their program for them (Optional).
